coworkingview

CoworkingView

Version 0.1.0

1 Purpose

`coworkingview` prints median prices from a snapshot of the CoworkingView Price Index. The snapshot is shipped in

`coworkingview-rates.csv`.

The package reads that file from the TeX input path. It does not open a network connection and it does not run shell commands.

The code and this document are distributed under the LaTeX Project Public License, version 1.3c or later. The rates file is not part of that work. It is Price Index data under CC BY 4.0 (`https://creativecommons.org/licenses/by/4.0/`). Keep `\cwvattribution` with any figure taken from the snapshot.

2 Snapshot

The file records three cities that have a price row: Abu Dhabi, Berlin and Madrid. The unpublished fixture city `example-town` is in the project's cities table and has no prices, so it is not in this file. `\cwvrate` and `\cwvratestable` raise a package error for it, as they do for any other unknown city.

Each row is copied from the open rates table. The median, the percentiles and the sample size are the recorded figures, not values computed by the package. The snapshot date is the `as_of` value on those rows:

2026-10-27T21:06:48.313Z

The column `low_confidence` is kept in the file and is not printed by the commands. Empty `p25` and `p75` cells mean that percentile was not published. Day passes and meeting rooms in this snapshot have no percentiles.

The recorded response credits the figures as follows. Aggregated figures only; no endorsement by CoworkingView or any operator is implied.

Source: CoworkingView Price Index (`https://coworkingview.com/en/tools/price-index`), as of October 2026. Licensed under CC BY 4.0 (`https://creativecommons.org/licenses/by/4.0/`). Aggregated figures only; no endorsement by CoworkingView or any operator is implied.

3 Commands

The package defines five commands. An unknown city is an error whose message lists the cities in the snapshot. An unknown product is an error whose message lists the products recorded for that city.

3.1 `\cwvrate`

`\cwvrate{`⟨*city*⟩`}` prints the median, the currency code and the unit for `flex_desk`. `\cwvrate[product=`⟨*product*⟩`]{`⟨*city*⟩`}` selects another product. The text is the median as stored, a space, the currency code, a slash and the unit, for example 214 EUR/month.

⟨*city*⟩ is a slug or a display name. Comparison ignores case. Spaces, hyphens and underscores are the same separator, so `Abu Dhabi`, `abu-dhabi` and `abu_dhabi` are one city.

⟨*product*⟩ is `flex_desk`, `fix_desk` or `private_office`, or `day_pass` or `meeting_room`. The same separator rule applies, so `private office` matches `private_office`. `flex_desk`, `fix_desk` and `private_office` are monthly. `day_pass` is daily. `meeting_room` is hourly. The unit in the output is the unit from the row.

`\cwvrate{berlin}`	214 EUR/month
`\cwvrate[product=day_pass]{Berlin}`	35 EUR/day
`\cwvrate[product=private office]{madrid}`	385 EUR/month
`\cwvrate{Abu Dhabi}`	1400 AED/month

3.2 `\cwvratestable`

`\cwvratestable{`⟨*city*⟩`}` prints a `tabular` with four columns: product, median, the interval from the 25th to the 75th percentile, and the sample size n. Products are ordered `flex_desk`, `fix_desk`, `private_office`, `day_pass`, `meeting_room`. A product that is absent for that city is omitted. A missing percentile is an em dash. The percentiles use the currency shown in the median column.

Berlin:

Product	Median	P25–P75	n
Flex desk	214 EUR/month	199–292	72
Fixed desk	310 EUR/month	290–421	60
Private office	480 EUR/month	399–550	59
Day pass	35 EUR/day	—	59
Meeting room	32 EUR/hour	—	79

Madrid:

Product	Median	P25–P75	n
Flex desk	175 EUR/month	130–199	13
Fixed desk	260 EUR/month	249–280	9
Private office	385 EUR/month	275–449	9
Day pass	22 EUR/day	—	11
Meeting room	28 EUR/hour	—	8

Abu Dhabi:

Product	Median	P25–P75	n
Flex desk	1400 AED/month	1400–1800	3
Fixed desk	1800 AED/month	1800–1800	2
Private office	2057 AED/month	1486–2629	2

3.3 Cities, date and credit

`\cwvcities` prints the display names in the order of the file: Abu Dhabi, Berlin, Madrid.

`\cwvsnapshotdate` prints 2026-10-27T21:06:48.313Z.

`\cwvattribution` prints the credit used next to a figure. This document loads `hyperref`, so the price-index name is a link and the visible text is "Data: CoworkingView Price Index, CC BY 4.0". Without `hyperref`, the package does not load it. The same words are printed and the URL is added with `\url` .

Data: CoworkingView Price Index, CC BY 4.0

4 Files

`coworkingview.sty`	package
`coworkingview-rates.csv`	snapshot, CC BY 4.0
`coworkingview-doc.tex`	this document
`coworkingview-doc.pdf`	typeset document
`README.md`	short description and licence
`LICENSE`	LPPL 1.3c, and the data licence
